Abstract. Type specimens from the collection of beetles (Coleoptera) deposited in the Department of Entomology, National Museum, Prague, are currently being catalogued. Here we present precise information about species-group types of the following scarabaeoid families: three taxa of the family Bolboceratidae, 83 taxa of Geotrupidae, 18 taxa of Glaphyridae, five taxa of Hybosoridae, two taxa of Ochodaeidae and 12 taxa of Trogidae. The rediscovery of the original syntypes of *Geotrupes hoffmannseggii* Fairmaire, 1856 and *Bolboceras excavatum* R. A. Philippi, 1859 set already designated neotypes for both species aside.

Introduction

The number of species-group type specimens of Coleoptera in the Department of Entomology of the National Museum, Prague (NMP; NMPC when referring to the collection) is estimated to several tens of thousands but the presence of some of them in the collection is still largely unknown. Although the International Code of Zoological Nomenclature encourages institutions to catalogue and access the type material in their care (ICZN 1999: Recommendation 72F), no such catalogue exists for NMPC. Therefore, the aim of the current work is to start the cataloguing of NMPC, improve the knowledge about the collections and provide information to the entomological community. We start with five families of the superfamily Scarabaeoidea. Along with the paper, a database of types including photos of most types and a copy of their original description is available on request.

* Catalogue of type specimens in NMPC 1

The Department of Entomology was founded by Dr. Jan Obenberger as an entomological unit of the Department of Zoology in 1920 and became entirely independent in 1952. The history of insect collections deposited in NMP is, however, much longer. The oldest specimens originate from the end of the 18th century and we briefly mention here only collections containing type specimens listed in this catalogue:

Collection of František Antonín Nickerl (1813–1871), Otakar Nickerl sen. (1838–1920) and Otakar Nickerl jun. (1873–1904). The collection of the father, son and grandson Nickerl came to the museum as inheritance in 1920 (VÁVRA 1923). It represents one of the oldest collections in NMP and includes predominantly Coleoptera, Lepidoptera and Heteroptera, which were recently incorporated into the general collection. The collection is important as it contains a number of types from the 19th century. Nicklerls' active communication, exchange and purchase of material with many entomologists of their era brought, e.g., the types of Rudolph A. Philippi (1808–1904) and Leon Fairmaire (1820–1906), the depository of which was largely unknown.

Collection of Vladimír Balthasar (1897–1978). The collection was purchased by the museum in smaller lots over 1980–1991. It represents the most important specialised collection of the scarabaeoid families in NMP. The collection, splitted in two parts, contains ca. 40,000 specimens including types of more than 500 species, most of them described by V. Balthasar himself.

Type material from the collection of David Král (born 1959). The complete type material (70 holotypes and 445 paratypes) from the collection of this contemporary Czech specialist on Scarabaeoidea was purchased by the museum in 2006. It includes, beside the species he described himself also specimens exchanged with other specialists, e.g., R. Červenka, P. J. Kuijten, M. Nikodým and G. V. Nikolajev.

Collection of Edmund Reitter (1845–1920). Edmund Reitter and his son Emmerich (1880–1945) ran their business in Moravian town of Paskov (= Paskau) and later in Opava (= Troppau). Their specimens, including types and specimens from the type localities, had been sold several times to numerous European entomological institutions. Therefore, the type status of specimens is problematic in many cases. A small part of the collection was confiscated in 1945 (because Reitters' were of German nationality) and subsequently came to NMP.

Type specimens of Rudolf Petrovitz (1906–1974). Rudolf Petrovitz specialized predominantly on Eastern Mediterranean Scarabaeidae and was invited to treat the large material from the museum expeditions to Turkey and Iran. The museum received as a gift or in exchange paratypes of several Petrovitz' taxa, predominantly from the family Glaphyridae.

Material and methods

The recent concepts of higher classification in the Scarabaeoidea are largely inconsistent. The classification used in this catalogue follows SCHOLTZ & GREBENNIKOV (2005).

Within each family, the genera and species are arranged alphabetically. Every entry includes:

- name of taxon in original combination.
- name of taxon in original combination and spelling. Pagination, figures and plates are also given.

- name-bearing type, number of specimens (eventually sex) and exact label data. Our remarks and comments are found in square brackets: [p] – preceding data are printed, [hw] – preceding data handwritten. Separate labels are indicated by double slash ‘//’, lines within each label are separated by a slash ‘/’.
- current taxonomic status.
- condition is mentioned for considerably damaged specimens.
- taxonomic problems and inconsistencies are mentioned in the ‘Remark’.

The types of infrasubspecific entities, i.e., names that are not regulated by the International Code of Zoological Nomenclature (ICZN 1999: Art. 1.3.4), are briefly commented in a separate list.

Catalogue

Family Bolboceratidae

Bolboceras excavatum R. A. Philippi, 1859

Bolboceras excavatus R. A. Philippi, 1859: 660 in F. PHILIPPI (1859).

Three syntypes are deposited in NMPC (ex coll. Nickerl):

SYNTYPE (♂): ‘Chile [hw] // Typus [p, red label, black margin] // Coll. Nickerl / Mus. Pragense [p] // Bolboceras / excavatum / Phil. Typ! Chili [hw, green label, black margin] // BOLBOCERAS / EXCAVATUM / PHILIPPI [hw] / LECTOTYPE / A.B.T. SMITH [p, red label] // Southern Neotropical Scarabs / database # AS 2616199 / *Bolborhinum laesicolle* / (Fairmaire, 1856) ♂ / DET: A.B.T. SMITH 2008 [p]’.

SYNTYPE (♂): ‘Chile [hw] // Typus [p, red label, black margin] // Coll. Nickerl, Mus. Pragense [p] // BOLBOCERAS / EXCAVATUM / PHILIPPI [hw] / PARALECTOTYPE / A.B.T. SMITH [p, yellow label] // Southern Neotropical Scarabs / database # AS 2616200 / *Bolborhinum laesicolle* / (Fairmaire, 1856) ♂ / DET: A.B.T. SMITH 2008 [p]’.

SYNTYPE (♂): ‘Chile [hw] // Typus [p, red label, black margin] // Coll. Nickerl, Mus. Pragense [p]’.

Current status. Junior subjective synonym of *Bolborrhinum laesicolle* (Fairmaire, 1856), see MONCADA & SMITH (2008).

Remark. PHILIPPI (1859) did not specify the depository of the type specimen(s). MONCADA & SMITH (2008) unsuccessfully checked for the type material at Museo Nacional de Historia Natural, Santiago de Chile, Chile, where the majority of Philippi’s types was housed. They concluded that the type series has been lost and they designated a neotype. Our rediscovery of the original syntypes of *B. excavatum* set the neotype aside. A lectotype designation proposed by Smith is, as of now, unpublished.

Bolbocerodema zonatum Nikolajev, 1973

Bolbocerodema zonatum Nikolajev, 1973: 859, Figs. 3, 11.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (unsexed specimen): ‘Yuzh. Primorie / Kedr. Pad‘ [p] 16.VII. [hw] / L. Zimina [p] 1962 [hw, in Cyrillic script] // Paratypus [p] Bolbocerodema / zonatum / Nikolajev [hw, red label]’.

Current status. *Bolbocerosoma zonatum* (Nikolajev, 1973), see LI et al. (2008).

Type condition. The specimen is badly damaged with the head and pronotum missing.

Stenaspidius houstoni Howden, 1993

Stenaspidius houstoni Howden, 1993: 384, Figs. 13–16.

One paratype is deposited in NMPC (general collection):

PARATYPE (unsexed specimen): ‘9-6-’92 / M. Golding [hw] // 28 k. N. Kanarina / W.A. redsand [hw] // PARATYPE / *Stenaspidius / houstoni / H. Howden [p, yellow label]*’.

Current status. Valid species.

Family Geotrupidae

Ceratophyus mesasiaticus Medvedev & Nikolajev, 1974

Ceratophyus mesasiaticus Medvedev & Nikolajev, 1974: 119.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘Yu. Pribaykalie / Ur. Karoy / 5.05. 1967 / leg. K. Slibkina [hw, in Cyrillic script] // Paratypus [p] *Ceratophyus / mesasiaticus / Medvedev et Nikolajev [hw, red label]*’.

Current status. Valid species.

Geotrupes folwarcznyi Červenka, 2005

Geotrupes folwarcznyi Červenka, 2005: 21, Figs. 2a–b.

Two paratypes are deposited in NMPC (ex coll. D. Král):

PARATYPE (unsexed specimen): ‘CHINA - E.Tibet / Lenang - 3250 m / 30 km W. of Tome / leg. A. Wrzecionko / 15. 6. 2001 // GEOTRUPES / (Glyptogeotrupes) / folwarcznyi sp.n. / PARATYPUS No. 17 / R. ČERVENKA det. 2001 [p, red label]’.

PARATYPE (♂): ‘CHINA - E.Tibet / Lenang - 3250 m / 30 km W. of Tome / leg. A. Wrzecionko / 15. 6. 2001 // GEOTRUPES / (Glyptogeotrupes) / folwarcznyi sp.n. / PARATYPUS No. 53 / R. ČERVENKA det. 2001 [p, red label]’.

Current status. Valid species. Subgeneric assignment of *G. folwarcznyi* is not stated in the original description.

Geotrupes (Trypocopris) heyrovskei Balthasar, 1929

Geotrupes (Trypocopris) Heyrovskýi Balthasar, 1929: 112.

The holotype is deposited in NMPC (ex coll. V. Balthasar):

HOLOTYPE (♀): ‘CANEZZA / TRENINO / HEYROVSKÝ. [p] // G. Heyrovskýi m. [hw] / Det. Dr. Balthasar [p] // Typus [p, red label, black margin]’.

Current status. Junior subjective synonym of *Trypocopris pyrenaeus splendens* (Heer, 1841), see, e.g., BARAUD (1992).

Geotrupes hoffmannseeggi Fairmaire, 1856

Geotrupes hoffmannseeggi Fairmaire, 1856: 530.

Two syntypes are deposited in NMPC (ex coll. Nickerl):

SYNTYPE (♂): ‘Geotrupes / Hoffmannseeggi [Fairmaire’s hw] // Fairmaire / coll. Dohrn [hw] // Hoffmannseeggi Fairm. / Marocco [hw, pink label, black margin]’.

SYNTYPE (♀): ‘Maroc [hw] // Fairmaire / coll. Dohrn [hw]’.

Current status. *Ceratophyus hoffmannseggi* (Fairmaire, 1856), see, e.g., ZUNINO (1973).

Remark. The discovery of Fairmaire's syntypes at NMP is surprising. Nevertheless, there is no doubt about the authenticity of these specimens. The identification label is written by Fairmaire himself. Moreover, it is evident from the primary description that Fairmaire examined both sexes when he described *G. hoffmannseggi*. ZUNINO (1973) unsuccessfully looked for types of this species at the Muséum national d'Histoire naturelle, Paris, France, where the majority of Fairmaire's types was deposited. He concluded that the types were lost and designated a neotype. Our rediscovery of the original syntypes of *G. hoffmannseggi* set the neotype aside.

***Geotrupes (Odontotrupes) imurai* Masumoto, 1995**

Geotrupes (Odontotrupes) imurai Masumoto, 1995: 383, Figs. 2, 10–12.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♀): ‘Pass. between Banfang- / zi & Xindianr. 2000m / Zhouzhi Xian. Shaanxi / May, 21-23 1993 (CHINA) / Imura, Fan, Koiwaya lg. // Paratype [p] / Geotrupes / imurai Masumoto [hw, pink label]’.

Current status. *Phelotrupes (Phelotrupes) imurai* (Masumoto, 1995), see KRÁL et al. (2001a).

***Geotrupes (Glyptogeotrupes) ovchinnikovi* Nikolajev, 2004**

Geotrupes (Glyptogeotrupes) ovchinnikovi Nikolajev, 2004: 98, Figs. 1–2.

Two paratypes are deposited in NMPC (ex. coll. D. Král):

PARATYPES (2 unsexed specimens): ‘Pakistan, Jammu & / Kashmir prov., near / Kel, 1-10.08.2001, / h= 3800-4100 m. / S. Ovchinnikov [p, red label] // Paratype *Geotrupes / ovchinnikovi* / Nikolajev 2004 [p, red label]’.

Current status. Valid species.

***Geotrupes (Thorectes) punctulatus* var. *rhilensis* Tesař, 1935**

Geotrupes (Thorectes) punctulatus var. *rhilensis* Tesař, 1935: 186.

Two syntypes are deposited in NMPC (general collection):

SYNTYPES (2 unsexed specimens): ‘Rila, Bulg. / Exp. Mařan et / Táborský lgt. [p] // Typus [p, red label, back margin] // Thorectes punctula- / tus v. rhilensis m. / Typus [hw] Det. Tesař [p]’.

Current status. Junior subjective synonym of *Thorectes punctulatus* (Jekel, 1866), see, e.g., BARAUD (1992).

***Geotrupes (Phelotrupes) semenowi* Reitter, 1887**

Geotrupes (Phelotrupes) Semenowi Reitter, 1887: 230.

Three paralectotypes are deposited in NMPC (ex coll. D. Král):

PARALECTOTYPE (unsexed specimen): ‘[hw, illegible original label] // Talatchu / By-tchu-Zuf / lüse d. ober / Blauen Fl. [hw] / Paralectotypus [p] / Geotrupes semenovi / Reitt. / 12. 10. 1972 Nikolajev [hw, red label]’.

PARALECTOTYPE (unsexed specimen): ‘[hw, illegible original label] // Paralectotypus [p] / Geotrupes / semenovi Reitt. / 12. 10. 1972 Nikolajev [hw, red label]’.

PARALECTOTYPE (♂): ‘[hw, illegible original label] // Gebirge an / d. oberen Zu / flüssen d. / Blauen Fl. [hw] // Geotrupes / Semenovi / m. 1887 [hw] // Geotrupes (Phelotrupes) / Semenowi Reitter, 1887 / PARALECTOTYPUS, / David Král des. 1999 [p, red label]’.

Current status. *Odontotrypes semenowi semenowi* (Reitter, 1887), see KRÁL et al. (2001a).

Remark. Two paralectotypes were designated by NIKOLAJEV (1977) and a third paralectotype was designated by KRÁL et al. (2001a).

***Geotrupes (Odontotrupes) szetshwanus* Nikolajev, 1977**

Geotrupes (Odontotrupes) szetshwanus Nikolajev, 1977: 381, Figs. 26–27.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘Mezhdú La-er-Tan / i Tou-tan / 11 - IV- 93 / Potanin [hw] // Paratypus [p] Geotrupes / szetschuanus / Nikolajev [hw, red label]’.

Four paratypes are deposited in NMPC (general collection):

PARATYPES (2 unsexed specimens): ‘Burdur [p] // Asia minor / leg. Petrovitz [p] // PARATYPE [p, red label] // Amph. Pygopl. / kareli m. / Petrovitz [p]’.

PARATYPES (2 ♂♂): ‘Isparta [p] // Asia minor / leg. Petrovitz [p] // PARATYPE [p, red label] // Amph. Pygopl. / kareli m. / Petrovitz [p]’.

Current status. *Pygopleurus kareli* (Petrovitz, 1962), see, e.g., BARAUD (1989).

***Amphicoma kubani* Nikodým, 2005**

Amphicoma kubani Nikodým, 2005: 14, Figs. 8, 45.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘Vietnam bor. / Pr. Hoang lien son / SA PA V. 1990 [p] // Amphicoma / kubani sp. n. / PARATYPE / Milan Nikodým 2004 [p, red label]’.

Current status. Valid species.

***Amphicoma (Pygopleurus) mithridates* Petrovitz, 1962**

Amphicoma (Pygopleurus) mithridates Petrovitz, 1962: 116, Fig. 11.

Twelve paratypes are deposited in NMPC (general collection):

PARATYPES (2 ♂♂): ‘Isparta [p] // Asia minor / leg. Petrovitz [p] // PARATYPE [p, red label] // Amph. Pygopl. / mithridates m. / Petrovitz [p]’.

PARATYPES (2 ♂♂): ‘Asia minor: Konya / leg. Petrovitz - Ressl [p] // PARATYPE [p, red label] // Amph. Pygopl. / mithridates m. / Petrovitz [p]’.

PARATYPE (unsexed specimen): ‘Asia minor: Konya / leg. Petrovitz - Ressl [p] // PARATYPE [p, red label] // Amph. Pygopl. / mithridates m. / Petrovitz [p] // PARATYPE [p] / Amphicoma / mithridates / Petrovitz Tesař’s hw, red label’.

PARATYPES (1 ♂, 5 unsexed specimens): ‘Burdur [p] // Asia minor / leg. Petrovitz [p] // PARATYPE [p, red label] // Amph. Pygopl. / mithridates m. / Petrovitz [p]’.

PARATYPE (unsexed specimen): ‘Burdur [p] // Asia minor / leg. Petrovitz [p] // PARATYPE [p, red label] // Amph. Pygopl. / mithridates m. / Petrovitz [p] // PARATYPE [p] / Amphicoma / mithridates / Petrovitz [Tesař’s hw, red label]’.

Current status. *Pygopleurus mithridates* (Petrovitz, 1962), see, e.g., BARAUD (1989).

***Amphicoma (Pygopleurus) rufovillosa nigropubescens* Petrovitz, 1963**

Amphicoma (Pygopleurus) rufovillosa ssp. *nigropubescens* Petrovitz, 1963a: 249.

Five paratypes are deposited in NMPC (general collection):

PARATYPE (♂): ‘Hatay: Akbés / leg. Petrovitz - Ressl [p] // PARATYPE [p, red label] // ssp. *nigropubescens* / nov. Petrovitz [p, red label] // Amph. (Pygopl.) / *rufovillosa* Rtr. / det Petrovitz [p] // PARATYPE [p] / A. *rufovillosa* Rtt. / ssp. *nigropubes-* / cens Petrovitz [Tesař’s hw, red label]’.

PARATYPE (♀): ‘Hatay : Akbés / leg. Petrovitz - Ressl [p] // PARATYPUS [p, red label] // ssp. nigropubescens / nov. Petrovitz [p] // Amph. (Pygopl.) / rufovillosa Rtrr. / det. Petrovitz [p]’.

PARATYPE (♂): ‘Hatay : Topbogazi / leg. Petrovitz - Ressl [p] // PARATYPUS [p, red label] // ssp. nigropubescens / nov. Petrovitz [p] // Amph. (Pygopl.) / rufovillosa Rtrr. / det. Petrovitz [p]’.

PARATYPES (1 ♂ 1 ♀): ‘Gaziantep : Fevzipasa / leg. Petrovitz-Ressl [p] // PARATYPUS [p, red label] // ssp. nigropubescens / nov. Petrovitz [p, red label] // Amph. (Pygopl.) / rufovillosa Rtrr. / det. Petrovitz [p]’.

Current status. *Pygopleurus rufovillosus nigropubescens* (Petrovitz, 1963), see, e.g., BARAUD (1989).

Amphicoma schneideri Nikodým, 2005

Amphicoma schneideri Nikodým, 2005: 18, Figs. 21–22, 54.

Two paratypes are deposited in NMPC (ex coll. D. Král):

PARATYPES (2 ♂♂): ‘CHINA-SICHUAN pr. / GUANXIAN / 8. 7. 1992 / J. SCHNEIDER lgt. [p] // *Amphicoma schneideri* sp. n. / PARATYPUS / Milan Nikodým 2004 [p, red label]’.

Current status. Valid species.

Amphicoma (Pygopleurus) sexualis Petrovitz, 1968

Amphicoma (Pygopleurus) sexualis Petrovitz, 1968: 472, Fig. 7.

Two paratypes are deposited in NMPC (general collection):

PARATYPES (1 ♂, 1 unsexed specimen): ‘Kusunkiran, östl. / Van, 2265m; 29.5.66 [p] // PARATYPUS [p, red label] // Amph. (Pygopl.) / sexualis nov. / Petrovitz [p, red label]’.

Current status. *Pygopleurus sexualis* (Petrovitz, 1968), see, e.g., BARAUD (1989).

Amphicoma (Pygopleurus) vulpes simplex Petrovitz, 1963

Amphicoma (Pygopleurus) vulpes ssp. *simplex* Petrovitz, 1963a: 246.

Two paratypes are deposited in NMPC (general collection):

PARATYPES (1 ♂, 1 unsexed specimen): ‘Camlidere [hw] // Asia minor / Petrovitz [p] // PARATYPUS [p, red label] // ssp. simplex m. / Petrovitz [p] // Amphic. (Pygopl.) / vulpes Fabr. / det Petrovitz [p]’.

Current status. *Pygopleurus simplex* (Petrovitz, 1963), see BARAUD (1989).

Pygopleurus zagrosensis Nikodým & Král, 1998

Pygopleurus zagrosensis Nikodým & Král, 1998: 346, Figs. 1–5.

Two paratypes are deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘IRAN, Zagros Mts., 1800-2500 m / pr. Boyerahmad-va-Kuhgiluych / Kuh-e-Dinar ridge, 10 km NE of / YASUJ, D. Král lgt., 1-2/5.1996 [p] // *Pygopleurus zagrosensis* sp.n. / PARATYPUS No. 4 ♂ / Milan Nikodým & David Král det. 1998 [p, red label]’.

PARATYPE (♀): ‘IRAN, Zagros Mts., 1800-2500 m / pr. Boyerahmad-va-Kuhgiluych / Kuh-e-Dinar ridge, 10 km NE of / YASUJ, D. Král lgt., 1-2/5.1996 [p] // *Pygopleurus zagrosensis* sp.n. / PARATYPUS No. 9 ♀ / Milan Nikodým & David Král det. 1998 [p, red label]’.

Current status. Valid species.

Family Hybosoridae

Araeotanypus orientalis Petrovitz, 1963

Araeotanypus orientalis Petrovitz, 1963b: 124 [incorrect original spelling].

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♀): ‘Süd Indien / leg. Nathan [p] // Nilgiri hills / Moyar camp / 3000 ft. V. 1954 [p] // ♀ [p] // PARATYPUS [p, red label] // Araeotanypus / orientalis m. / Petrovitz [p]’.

Current status. *Phaeocrodes orientalis* (Petrovitz, 1963), see PETROVITZ (1972) and KUIJTEN (1988).

Phaeochroops colopacilis Kuijten, 1981

Phaeochroops colopacilis Kuijten, 1981: 16, Figs. 11–16, plate 1.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♀): ‘♀ [p] // VIETNAM: Cuc phuong / Ninh binh / 6.-18.V. 1966 / Exp. Gy. TOPÁL [p] // Nr. 385 / from trap / in soil [p] // Paratype [p, pink label] // Phaeochroops / colopacilis / Kuijten [hw] / det. P. Kuijten, 1979 [p]’.

Current status. Valid species.

Phaeochroops ninbin Kuijten, 1981

Phaeochroops ninbin Kuijten, 1981: 45, Figs 60–65.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♀): ‘VIETNAM: Cuc phuong / Ninh binh / 6.-18.V. 1966 / Exp. Gy. TOPÁL [p] // Nr. 386 / from trap / in soil [p] // Paratype [hw, pink label] // Phaeochroops / ninbin ♀ / Kuijten [hw] / det. P. Kuijten, 1978 [p] / paratype [hw]’.

Current status. Valid species.

Phaeochroops seres Kuijten, 1981

Phaeochroops seres Kuijten, 1981: 60, Figs. 81–85, plate 4.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘VIETNAM: Cuc phuong / Ninh binh / 11.-17.V. 1966 / Exp. Gy. TOPÁL [p] // Nr. 361 / from / carcass [p] // Paratype [hw, pink label] // Phaeochroops / seres ♂ / Kuijten [hw] / det. P. Kuijten, 1978 [p]’.

Current status. Valid species.

Phaeochrous pseudointermedius Kuijten, 1978

Phaeochrous pseudointermedius Kuijten, 1978: 29, Fig. 15.

One paratype is deposited in NMPC (ex coll. D. Král):

PARATYPE (♂): ‘VIETNAM: Cuc phuong / Ninh binh / 11.-17.V. 1966 / Exp. Gy. TOPÁL [p] // Nr. 361 / from / carcass [p] // Paratype [p, pink label] // Phaeochrous / pseudointer- / mediuss Kuijten [hw] / det. P. Kuijten, 19 [p]’.

Current status. Valid species.

Family Ochodaeidae

Codocera ferruginea chinensis Balthasar, 1936

Codocera ferruginea ssp. *chinensis* Balthasar, 1936b: 98.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): ‘Chi feng hsien / Prov. Tschili / China sept. [p] // Typus [p, red label, black margin] // Codocera ferrug. / chinensis n. ssp. Typ! [hw] / Dr. V. Balthasar det. [p]’.

Current status. Valid subspecies.

Ochodaeus tonkineus Balthasar, 1952

Ochodaeus tonkineus Balthasar, 1952: 222.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): ‘Hoa Binh (Tonkin) / (A. de Cooman) / Coll. J. Clermont [p] // TYPUS [p, red label, black margin] // Ochodaeus / tonkinensis n. sp. [hw] / Dr. V. Balthasar det. [p]’.

Current status. Valid species.

Remark. Although the species name is spelled as ‘tonkinensis’ on Balthasar’s identification label, it was published under the name ‘tonkineus’.

Family Trogidae

Trox granulipennis sordidatus Balthasar, 1936

Trox granulipennis ssp. *sordidatus* Balthasar, 1936a: 452.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (♂): ‘Graecia / Attika [p] // Coll. Dr. Melichar [p] // Typus [p, red label, black margin] // ssp. *sordidatus* / Typ! [hw] / dr. V. Balthasar det. [p] // *Trox hispidus* (Pontop.) = *T. granulipennis* / *sordidatus* Balth. N. SYN. / HOLOTYPE / Det. Pittino 1985 [hw]’.

Current status. *Trox sordidatus* Balthasar, 1936, see PITTINO (2006).

Remark. Although PITTINO (1983) indicated this specimen as a holotype, there was no evidence on the length of the type series in the original description. Riccardo Pittino labeled it as a junior subjective synonym of *Trox hispidus* (Pontoppidan, 1763), but this synonymy was never published. Moreover, PITTINO (2006) reported it as a valid species.

Trox haroldi Flach, 1879

Trox Haroldi Flach, 1879: 155.

One syntype is deposited in NMPC (general collection):

SYNTYPE (unsexed): ‘Aschaffen / burg [hw] // Haroldi [hw] // Haroldi / Typ [hw]’.

Current status. Subjective junior synonym of *Trox perrissii* Fairmaire, 1868, see, e.g., PITTINO (2006).

Trox ineptus Balthasar, 1931

Trox ineptus Balthasar, 1931: 131.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (♂): ‘Werchne-Udinsk / Trsbaikal. Mandl [p] // Typus [p, red label, black margin] // *Trox ineptus* m. [hw] / Det. Dr. Balthasar [p] / Typus! [hw]’.

Current status. Valid species.

***Trox komareki* Balthasar, 1931**

Trox Komáreki Balthasar, 1931: 130.

The holotype is deposited in NMPC (ex coll. V. Balthasar):

HOLOTYPE (unsexed specimen): ‘Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox Komáreki m. [hw] / Det. Dr. Balthasar [p] / Typus ! [hw]’.

Current status. *Trox cadaverinus komareki* Balthasar, 1931, see BALTHASAR (1933).

***Trox litoralis* Pittino, 1991**

Trox litoralis Pittino, 1991: 77, Figs. 15–18.

Six paratypes are deposited in NMPC (general collection):

PARATYPE (♀): ‘It. III. 37 / Mti Albani [hw] // Paratypus [p, red label] // Trox litoralis n. sp. [hw] / Det. Pittino 1989 [p, red label]’.

PARATYPE (unsexed specimen): ‘Trox / hispidus / [locality illegible] [hw] // Trox litoralis m. / PARATYPUS / DET. R. PITTINO 1989 [p, red label]’ [ex coll. Ludwig Salvator].

PARATYPE (unsexed specimen): ‘Jugoslavia [p] / Trpaň [hw] / Dr. J. Fleischer [p] // Trox litoralis / n. sp. PARATYPUS / Det. Pittino 1989 [hw, red label]’.

PARATYPE (unsexed specimen): ‘Catania. / B.Kouřil / Sicil. [on side] [p] // * [p] // Trox / hispidus Pon. [hw] / Det. B.Kouřil. [p] // Trox / hispidus Pont. [hw] / DR. V. BALTHASAR. DET. [p] // 8123 [p] // Trox / hispidus / 8123 [hw, yellow label] // Trox litoralis m. / PARATYPUS / DET. R. PITTINO 1989 [p, red label]’.

PARATYPE (unsexed specimen): ‘Catania. / B.Kouřil / Sicil. [on side] [p] // * [p] // Trox litoralis m. / PARATYPUS / DET. R. PITTINO 1989 [p, red label]’.

PARATYPE (unsexed specimen): ‘Albania mer. / Sarandë / Smetana 1958 [p] // Trox litoralis / n. sp. PARATYPUS / Det. Pittino 1989 [hw, red label]’.

Current status. Valid species.

***Trox mandli* Balthasar, 1931**

Trox mandli Balthasar, 1931: 128.

The holotype is deposited in NMPC (ex coll. V. Balthasar):

HOLOTYPE (unsexed specimen): ‘Werchne-Udinsk / Trsbaikal. Mandl [p] // Typus [p, red label, black margin] // Trox mandli m. [hw] / Det. Dr. Balthasar [p] / Typus ! [hw] // Trox mandli / valid species / Holotypus / Det. Pittino 1985 [hw]’.

Current status. Valid species.

***Trox mitis* Balthasar, 1933**

Trox mitis Balthasar, 1933: 81.

Three syntypes are deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): ‘Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox mitis m. / Typus ! [hw] / Det. Dr. Balthasar [p] // Trox mitis Balth. / valid species / Lectotypus / Det. Pittino 1985 [hw, red label]’.

SYNTYPES (2 unsexed specimens): ‘Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin]’.

Current status. Valid species.

Remark. Designation of the lectotype proposed by Pittino is, as of now, still formally unpublished. KRÁL & MOČEK (1998) recorded additional two types deposited in the Museum of Eastern Bohemia in Hradec Králové, Czech Republic. Nevertheless, the locality data of

these specimens do not fully agree with the original description. Most probably they represent specimens compared with type(s) rather than true syntypes.

***Trox novaecaledoniae* Balthasar, 1966**

Trox novae-caledoniae Balthasar, 1966: 184, Fig. 4.

Four paratypes are deposited in NMPC (ex coll. V. Balthasar):

PARATYPE (♂): 'NEW CALEDONIA / Beach nr La Foa / 19. XI. 1958 [p] // Under dead fish / in sand [p] // C. R. Joyce / Collector [p] // *Trox novae- caledoniae* n. sp. / Balthasar 66 [hw] / Paratypus [p, pink label] // *Trox costatus* Wied. / = *T. novaecaledoniae* / Balth. N. SYN. / Det. PITTINO 1985 [hw'].

PARATYPES (3 unsexed specimens): 'NEW CALEDONIA / Beach nr La Foa / 19. XI. 1958 [p] // Under dead fish
/ in sand [p] // C. R. Joyce / Collector [p] // *Trox novae- caledoniae* n. sp. / Balthasar 66 [hw] / Paratype [p,
pink label]'.

Current status. Junior subjective synonym of *Omorgus (Omorgus) suberosus* (Fabricius, 1775), see SCHOLTZ (1986, 1990).

Remark. Five paratypes were originally housed in coll. Balthasar (BALTHASAR 1966) but we found only four paratypes. Although Pittino indicated this species as a junior subjective synonym of *Trox costatus* Wiedemann, 1823 [currently *Omorgus (Afromorgus) costatus*], SCHOLTZ (1986, 1990) reported it as a junior subjective synonym of *Omorgus (Omorgus) suberosus*.

***Trox strandi* Balthasar, 1936**

Trox Strandi Balthasar, 1936a: 452.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): 'Sidi-Bel / Abbe, Alg. / V. Zoufal [p] // Typus [p, red label, black margin] // T. strandi m. / Typ [hw] / Dr. V. Balthasar det. [p] // Trox / fabricii Reiche / syn. nov. / Det. Pittino 1985 [hw]'.

Current status. Valid species.

Remark. Although Pittino indicated this species as a junior subjective synonym of *Trox fabricii* Reiche, 1853, the synonymy has never been formally published. Moreover, PITTINO (2006) reported it as a valid species.

Trox ussuriensis Balthasar, 1931

Trox ussuriensis Balthasar, 1931: 129.

Two syntypes are deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): 'Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox ussuriensis m. [hw] / Det. Dr. Balthasar [p] / Typus ! [hw] // Trox ussuriensis Blth. / valid sp. / Det. Pittino 1985 [hw]'.

SYNTYPE (unsexed specimen): 'Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox ussuriensis m. [hw] / Det. Dr. Balthasar [p] / Typus ! [hw]'.

Current status. Valid species.

Remark. KRÁL & MOČEK (1998) recorded an additional cotype in the Museum of Eastern Bohemia in Hradec Králové, Czech Republic. Nevertheless, the locality data of this specimen do not fully agree with the original description. Most probably it represents a specimen compared with type(s) rather than a true syntype.

***Trox vimmeri* Balthasar, 1931**

Trox Vimmeri Balthasar, 1931: 130.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (♀): ‘Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox Vimmeri m. [hw] / Det. Dr. Balthasar [p] / Typus ! [hw] // Trox vimmeri / Balth. valid spec. / Holotypus / Det. Pittino 1985 [hw]’.

Current status. Valid species.

Remark. Although Pittino indicated this specimen as a holotype, there is no evidence of the length of the type series in the primary description.

***Trox zoufali* Balthasar, 1931**

Trox Zoufali Balthasar, 1931: 131.

One syntype is deposited in NMPC (ex coll. V. Balthasar):

SYNTYPE (unsexed specimen): ‘Nikolsk Ussurijsk / Ussurigeb. Mandl [p] // Typus [p, red label, black margin] // Trox Zoufali m. [hw] / Det. Dr. Balthasar [p] / Typus [hw] // Trox zoufali Blth. / valid species / Holotypus / Det. Pittino 1985 [hw]’.

Current status. Valid species.

Remark. Although Pittino indicated this specimen as a holotype, there is no evidence of the length of the type series in the original description.

Missing types

Family Trogidae

***Trox (Omorgus) fenestrellus* Balthasar, 1939**

Trox (Omorgus) fenestrellus Balthasar, 1939: 34.

Current status. *Afromorgus fenestrellus* (Balthasar, 1939), see PITTINO (2006). On the other hand, SCHOLTZ (1979) regarded it as a junior subjective synonym of *Afromorgus melancholicus* (Fåhraeus, 1857).

Remark. The species was described according to a holotype specimen from the collection of V. Balthasar (BALTHASAR 1939). However, there is no mention of this species in the Balthasar’s collection, and we were not able to trace the type specimen in NMPC.

Types of infrasubspecific entities

Family Glaphyridae
